WP Flow

Water-impermeable floor levelling compound for interior waterproofing

Constituents

VOC content (definition according to Directive 2004/42/EC)

does not contain

Biocidal agents

no ingredients of the formulation

SVHC as per Regulation 1907/2006/EC ("REACH")

Does not contain (<0.1%)

Guideline VdL 01 (as of June 2024, 9th revision)

Free of aromatic compounds
Biocide-free / preservative-free
Solvent-free
Plasticiser-free

Other

The formula does not contain any heavy metal pigments or siccatives based on lead, cadmium or chromium (VI) compounds.

Building certificates

Suitability as per DGNB Criterion ENV 1.2 - "Local environmental impact"

Nr.	Place of use	Product type	QS1	QS2	QS3	QS4
2	Coatings on predominantly mineral substrates in interiors, such as filler (and dispersion filler) as well as wallpaper, non-woven fabric, gypsum plasterboard, etc. Not intended for floors with special durability requirements (e.g. OS systems) and traffic routes such as underground car parks, access roads	This means decorative paints, primers, decorative fillers (including Q filler) and deep primer, floor coatings without special resistance requirements, concrete glazes	Yes	Yes	Yes	Yes
3	Coatings on predominantly mineral interior substrates such as concrete, brickwork, mortar and filler (e.g. concrete filler). Not intended for floors with special durability requirements (e.g. OS systems) and traffic routes such as underground car parks and access roads, as well as fair-faced or decorative screeds.	Dust-binding coatings, base coats e.g. concrete contact, barrier layer	Yes	Yes	Yes	Yes
9	Blocking screeds, screed resins, waterproofing under tiles	Installation aids	Yes	Yes	No	No

Suitability according to BNB criterion / Version V 2015 (version dated 28/09/2017)

No.	Construction product group	Construction product type	QN1	QN2	QN3	QN4	QN5
4	Filling compounds (including Q filling), dust-binding coatings/primers (in accordance with Decopaint Directive, Cat. G + H), protective coatings for concrete (resistant to oil, acid, water, etc.)	Coatings on predominantly mineral interior surfaces: Concrete, brickwork, mortar, filler (including dispersion filler), plaster, non-woven fabric, gypsum plasterboard, etc.	Yes	Yes	Yes	Yes	Yes

Suitability according to QNG criterion / Version 1.3 2022

Pos.	Construction product group	Construction product type	QNG
5.3	Filling compounds (including Q filling), dust-binding coatings/primers	Coatings on predominantly mineral interior surfaces: Concrete, brickwork, mortar, filler (including dispersion filler), plaster, gypsum plasterboard, etc.	Yes
